**When you think of Tectyl, do you still think of black, filthy rust protection? It can be done differently now!**

High-quality protection against corrosion is what Tectyl can offer you. The numerous applications for Tectyl of Valvoline are gigantic!

It is quite possible that when you think of Tectyl, you think of black, smelling rust protecting products. That is where Tectyl is known for worldwide.

Tectyl products are still being used if a metal needs to be protected against corrosion. But they are no longer used with the same solvent-based products of before. Because of the knowledge and experience gained over the years, a new product line is developed that is waterborne and free of solvents.

For users this offers a lot of advantages. These waterborne products are odourless which is a major improvement compared to the traditional Tectyl products. **When used correctly, these waterborne products can reduce the use up to 30%.** Furthermore, the drying of the Tectyl waterborne products is superior in comparison to solvent-based products. Last but not least, the use of these products has no negative effects for the environment, which is a very important aspect.

A suitable advice is of course essential to solve your preservation problem! Every situation asks for a unique approach and IPAR will gladly be of assistance. If you are interested in more detailed information, do not hesitate to contact us.
